[Islet cell antigen 2 \(IA2\) testing is available individually \(this test\) and with glutamic acid decarboxylase 65-kilodalton isoform \(GAD65\), insulin, and zinc transporter 8 \(ZnT8\) antibodies as a part of DBS1 / Diabetes Mellitus Type 1 Evaluation, Serum. The evaluation is most appropriate to order in the following clinical contexts:](#)

- Distinguishing type 1 (autoimmune) diabetes mellitus from type 2 diabetes mellitus
- Identifying individuals at risk of type 1 diabetes (including high-risk relatives of patients with diabetes)
- Predicting future insulin requirement treatment in patients with adult-onset diabetes

Individual antibody testing would be more appropriate if 1, 2, or 3 of the analytes (GAD65, IA-2, insulin, ZnT8 antibodies) have already been tested and reported negative, and the provider wishes to test for the balance of remaining untested analytes only.
