

# **Test Definition: SHUR**

Schistosoma Exam, Random, Urine

## Overview

**Useful For** Aiding in the diagnosis of schistosomiasis infections involving the urinary tract

Method Name Microscopic

NY State Available Yes

Specimen

Specimen Type

Urine

## Specimen Required

Supplies: Urine Tubes, 10 mL (T068)
Collection Container/Tube: Clean, plastic urine collection container
Submission Container/Tube: Plastic, 10-mL urine tube
Specimen Volume: 10 mL
Collection Instructions:
1. Collect a random urine specimen. Preferred time of collection between the hours of 12 noon and 3 p.m. but not required. A 24-hour urine collection is also acceptable.
2. No preservative.

## **Specimen Minimum Volume**

5 mL

## **Reject Due To**

Preserved	Reject
urine	

## **Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Urine	Refrigerated	7 days	

## **Clinical & Interpretive**

Schistosoma Exam, Random, Urine

## **Clinical Information**

Schistosomiasis is an infection caused by several species of trematodes (flukes) in the genus *Schistosoma*. The adult worms of *Schistosoma haematobium* inhabit the venus plexus of the bladder and produce eggs that are typically passed in the urine. Peak egg excretion occurs between noon and 3 p.m. Identification of characteristic eggs in urine is diagnostic for infection with this organism.

## **Reference Values**

Negative If positive, organism identified

#### Interpretation

A positive result indicates the presence of *Schistosoma* species ova in urine.

A negative result does not rule out the presence of *Schistosoma* species since ova may be present at levels below the detection limits of this assay, or infection may not involve the urinary tract.

## Cautions

No significant cautionary statements

## **Clinical Reference**

# Performance

## **Method Description**

Filter concentration of urine has been shown to increase recovery of *Schistosoma haematobium* eggs from urine. Ten milliliters of urine is passed through a membrane filter and the filter is examined under the microscope for the characteristic eggs.(Garcia L: Diagnostic Medical Parasitology. 6th ed. ASM Press, 2016)

PDF Report

Day(s) Performed Monday through Saturday

Report Available 1 to 4 days

**Specimen Retention Time** 

Schistosoma Exam, Random, Urine

Until reported

**Performing Laboratory Location** 

Rochester

# Fees & Codes

#### Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

## **Test Classification**

This test has been cleared, approved, or is exempt by the US Food and Drug Administration and is used per manufacturer's instructions. Performance characteristics were verified by Mayo Clinic in a manner consistent with CLIA requirements.

#### **CPT Code Information**
