

Test Definition: FNEU2

Neurotensin

Overview

Method Name

Radioimmunoassay (RIA)

NY State Available

No

Specimen

Specimen Type

Z-Tube Plasma

Specimen Required

Patient preparation:

- 1. Patient should be fasting 10 to 12 hours prior to collection of specimen.
- 2. Patient should not be on any antacid medication or medications that affect gastroentero-intestinal function, if

possible, for at least 48 hours prior to collection.

Supplies: Z-Tube Preservative Inter Science Institute (MCL T701)

Specimen Type: Plasma

Container/Tube: Z tube (MCL T701)

Submission Container/Tube: Plastic vial

Specimen Volume: 3 mL

Collection Instructions:

- 1. Collect 10 mL of blood directly into special Z-tube and separate as soon as possible.
- 2. Freeze immediately after separation.
- 3. Send 3 mL of plasma frozen.

Specimen Minimum Volume

1 mL

Reject Due To

Gross	Reject
hemolysis	
Gross lipemia	Reject
Gross icterus	Reject
Specimens not	Reject
collected in	
Z-Tube	

Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Z-Tube Plasma	Frozen	180 days	

Clinical & Interpretive

Clinical Information

Neurotensin is a 13 amino acid peptide produced primarily by endocrine cells of the ileal mucosa. Physiological actions of Neurotensin include hypertension, vasodilation, hyperglycemia, and inhibition of gastric motility. Its C-terminus is similar to Angiotensin I. It is a potent analgesic affecting hypothermia, muscle relaxation, and decreased motor activity. Pancreatic Polypeptide secretion is strongly stimulated by Neurotensin. Neurotensin appears to cause the release of Luteinizing Hormone-Releasing Hormone and Corticotropin Releasing Hormone effecting the release of Luteinizing Hormone, Follicle Stimulating Hormone, and ACTH but not Thyroid Stimulating Hormone or Growth Hormone. Neurotensin also stimulates pancreatic bicarbonate and intestinal secretion. Neurotensin levels are stimulated by food and Bombesin. Elevated levels have been found in pancreatic endocrine tumors, Oat Cell, Squamous, and Adeno Carcinomas.

Elevated levels have been found to cause watery diarrhea.

Reference Values

50-100 pg/mL

Cautions

Values obtained with different methods, laboratories, or kits cannot be used interchangeably with the results on this report. The results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.

Fees & Codes

Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact Customer Service.

Test Classification

This test was developed and its performance characteristics determined by Inter Science Institute. Values obtained with different methods, laboratories, or kits cannot be used interchangeably with the results on this report. The results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.
