

Susceptibility, *Mycobacterium tuberculosis* Complex, Second Line, Varies

Test ID: TB2LN

Explanation: The first line antimicrobial agents: isoniazid, rifampin, and ethambutol, have been reported under this laboratory developed microtiter broth dilution method since January 2022, due to reagent backorder. The reagent backorder issues affecting our FDA-cleared commercial system for rapid broth susceptibility testing of *M tuberculosis* complex isolates for the first line antimicrobial agents has been resolved.

Mayo test code **TB1LN / Antimicrobial Susceptibility, *Mycobacterium tuberculosis* Complex, First Line, Varies** should now be ordered since the first line antimicrobial agents will no longer be reported under this method.
