

Notification Date: April 25, 2024 Effective Date: June 4, 2024

# Histoplasma/Blastomyces Panel, Spinal Fluid

Test ID: HIBC

**Useful for:** 

Aiding in the diagnosis of histoplasmosis or blastomycosis meningitis

#### **Profile Information:**

Test ID	Reporting Name	Available Separately	Always Performed
HICSF	Histoplasma Ab CompFix/ImmDiff, CSF	Yes	Yes
CBL	Blastomyces Ab Immunodiffusion, CSF	Yes	Yes

#### Methods:

HICSF: Complement Fixation (CF)/Immunodiffusion (ID)

CBL: Immunodiffusion (ID)

#### **Reference Values:**

HISTOPLASMA ANTIBODY

Anti-Yeast antibody by Complement Fixation: Negative (positive results reported as titer)

Antibody by Immunodiffusion: Negative (positive results reported as titer)

#### BLASTOMYCES ANTIBODY IMMUNODIFFUSION

Negative

## **Specimen Requirements:**

Container/Tube: Sterile vial

Specimen Volume: 1.5 mL

Collection Instructions: Submit specimen from collection vial 1

Minimum Volume: 1.0 mL

## **Specimen Stability Information:**

Specimen Type	Temperature	Time
CSF	Refrigerated (preferred)	14 days
	Frozen	14 days

## Cautions:

#### Histoplasma:

- Antibody levels may be low in spinal fluid in cases of Histoplasma meningitis.
- Histoplasmin skin tests yield specific antibodies in titratable quantity, and may cause difficulties in interpretation.
- Cross-reacting antibodies with coccidioidomycosis or blastomycosis may cause false-positive results for histoplasmosis.

## Blastomyces:

- A negative result does not rule out blastomycosis.
- Patients with histoplasmosis may have low-titered cross reactions.

#### **CPT Code:**

86698 x2 86612

## Day(s) Performed:

Monday; 6 a.m. Tuesday through Friday; 9:30 a.m.

Report Available: 3 to 7 days
