

Birt-Hogg-Dube Syndrome, *FLCN*, Full Gene Analysis, Varies

Test ID: BHDZ

Explanation: On the effective date, this assay will incorporate changes to the specimen requirements. Whole blood stability guidance will be provided, and *any anticoagulant* will no longer be accepted. Anticoagulants will be limited to those listed below. Saliva will also be added as an acceptable specimen type.

Current Specimen Required	New Specimen Required
<p>Patient Preparation: A previous bone marrow transplant from an allogenic donor will interfere with testing. Call 800-533-1710 for instructions for testing patients who have received a bone marrow transplant.</p>	<p>Patient Preparation: A previous bone marrow transplant from an allogenic donor will interfere with testing. <p>Specimen Type: Whole blood</p>	<p>Specimen Type: Whole blood</p>
<p>Preferred: Lavender top (EDTA) or yellow top (ACD)</p>	<p>Preferred: Lavender top (EDTA) or yellow top (ACD)</p>
<p>Acceptable: Any anticoagulant</p>	<p>Acceptable: Sodium heparin</p>
<p>Specimen Volume: 3 mL</p>	<p>Specimen Volume: 3 mL</p>
<p>Collection Instructions:</p> <ol style="list-style-type: none">1. Invert several times to mix blood.2. Send whole blood specimen in original tube. Do not aliquot.	<p>Collection Instructions:</p> <ol style="list-style-type: none">1. Invert several times to mix blood.2. Send whole blood specimen in original tube. Do not aliquot.
<p>Specimen Stability Information: Ambient (preferred) 4 days/Refrigerated</p>	<p>Specimen Stability Information: Ambient/Refrigerated/Frozen, 96 hours (preferred); extraction will be attempted for samples received after 96 hours and DNA yield will be evaluated to determine if testing may proceed</p> <p>Additional Information: To ensure minimum volume and concentration of DNA is met, the preferred volume of blood must be submitted.</p>

Testing may be canceled if DNA requirements are inadequate.

Specimen Type: Saliva

Patient Preparation: Patient should not eat, drink, smoke, or chew gum 30 minutes prior to collection.

Supplies: Saliva Collection Kit (T786) – ORAcollect OCD-100 Swab

Specimen Volume: 1 Swab

Collection Instructions: Collect and send specimen per kit instructions.

Specimen Stability Information: Ambient (preferred), Refrigerated acceptable; 30 days

Additional information: Due to lower quantity/quality of DNA yielded from saliva, some aspects of the test may not perform as well as DNA extracted from a whole blood sample. When applicable, specific gene regions that were unable to be interrogated will be noted in the report. Alternatively, additional specimen may be required to complete testing.
